This is the origin story of technology super heroes: the creators and founders of ARM, the company that is responsible for the processors found inside 95% of the world's mobile devices today. This is also the evolution story of how three companies - Apple, Samsung, and Qualcomm - put ARM technology in the hands of billions of people through smartphones, tablets, music players, and more. It was anything but a straight line from idea to success for ARM. The story starts with the triumph of BBC Micro engineers Steve Furber and Sophie Wilson, who make the audacious decision to design their own microprocessor - and it works the first time. The question becomes, how to sell it? Part I follows ARM as its founders launch their own company, select a new leader, a new strategy, and find themselves partnered with Apple, TI, Nokia, and other companies just as digital technology starts to unleash mobile devices. ARM grows rapidly, even as other semiconductor firms struggle in the dot com meltdown, and establishes itself as a standard for embedded RISC processors. Apple aficionados will find the opening of Part II of interest the moment Steve Jobs returns and changes the direction toward fulfilling consumer dreams. Samsung devotees will see how that firm evolved from its earliest days in consumer electronics and semiconductors through a philosophical shift to innovation. Qualcomm followers will learn much of their history as it plays out from satellite communications to development of a mobile phone standard and emergence as a leading fabless semiconductor company. If ARM could be summarized in one word, it would be "collaboration." Throughout this story, from Foreword to Epilogue, efforts to develop an ecosystem are highlighted. Familiar names such as Google, Intel, Mediatek, Microsoft, Motorola, TSMC, and others are interwoven throughout. The evolution of ARM's first 25 years as a company wraps up with a shift to its next strategy: the Internet of Things, the ultimate connector for people and devices. Research for this story is extensive, simplifying a complex mobile industry timeline and uncovering critical points where ARM and other companies made fateful and sometimes surprising decisions. Rare photos, summary diagrams and tables, and unique perspectives from insiders add insight to this important telling of technology history.

This book meets the present and future needs for the interaction between various science and technology/engineering areas on the one hand and different branches of soft computing on the other. Soft computing is the recent development about the computing methods which include fuzzy set theory/logic, evolutionary computation (EC), probabilistic reasoning, artificial neural networks, machine learning, expert systems, etc. Soft computing refers to a partnership of computational techniques in computer science, artificial intelligence, machine learning, and some other engineering disciplines, which attempt to study, model, and analyze complex problems from different interdisciplinary problems. This, as opposed to traditional computing, deals with approximate models and gives solutions to complex real-life problems. Unlike hard computing, soft computing is tolerant of imprecision, uncertainty, partial truth, and approximations. Interdisciplinary sciences include various challenging problems of science and engineering. Recent developments in soft computing are the bridge to handle different interdisciplinary science and engineering problems. In recent years, the correspondingly increased dialog between these disciplines has led to this new book. This is done, firstly, by encouraging the ways that soft computing may be applied in traditional areas, as well as point towards new and innovative areas of applications and secondly, by encouraging other scientific disciplines to engage in a dialog with the above computation algorithms outlining their problems to both access new methods as well as to suggest innovative developments within itself.

"Visual Tools for Developing Cross-Disciplinary Collaboration, Innovation and Entrepreneurship Capacity will identify and document pedagogical and practice-based visual approaches to scaffold and develop capacity for cross-disciplinary collaboration, innovation and entrepreneurship. An introductory chapter will introduce and contextualise the key themes of the book. It outlines the value in supporting acquisition of cross-disciplinary collaboration, innovation and entrepreneurship skills in students and why visual tools are particularly useful in doing this. The main body of the book will be divided into four sections, each will include theory and case study based inquiries. - Visual Tools for Collaboration This first section would explore approaches to developing skills for cross-disciplinary collaboration in students leveraging visual tools and artefacts. - Visual tools for Innovation This second section would explore approaches to scaffolding the acquisition of innovation skills in students via use of visual tools and artefacts. - Visual tools for Entrepreneurship This third section would explore how students can be supported and encouraged to attain appropriate skills and knowledge for successful entrepreneurship through the use of visual tools and artefacts. - Integrated Approaches This fourth, and final, section will demonstrate integrated approaches with respect two or three of these. The chapter authors have been selected from across disciplinary specialisations from a global pool of educators and practitioners in order to provide a broad range of perspectives. A final summary chapter summaries and reflects on the key insights of the book"--

BlackBerry Planet is a new tribe of people who simply cannot get along without their favorite device, Research in Motion ' s innovative electronic organizer, the BlackBerry. This omnipresent device has gone beyond being the world ' s foremost mobile business tool and entered the consumer mainstream as the Swiss Army Knife of smart phones. BlackBerry Planet tells the behind-the-scenes story of how this little device has become the machine that connects the planet. Starting with the early years of Mike Lazaridis ' invention and his founding of RIM at age 23, it details his drive to innovate, developing what was a glorified pager into the essential corporate communicator, used by everyone from dealmakers to the Queen, from movie stars to the entire US Congress. Since 1992, Lazaridis and co-CEO Jim Balsillie together have been the driving force behind the RIM story. With access to senior staffers and former RIM employees, BlackBerry Planet tells the inside story about the branding and marketing success of the BlackBerry, from its use during 9/11, which earned RIM a reputation for security and reliability, to the cultural adoption of the iconic device as a must-have symbol, to the backlash against the addictive properties of the " CrackBerry. " and the various patent suits RIM has had to fight off-- including the five-year court battle that resulted in the largest technology patent settlement in US history. As the incredible story of the BlackBerry unfolds, and as RIM battles global giants like Nokia and Apple in the emerging super-phone marketplace, users, fans, investors and competitors can look to BlackBerry Planet for the insight and context of where they ' ve been, to try and predict where they ' re going.

Is civilization teetering on the edge of a cliff? Or are we just climbing higher than ever? Most people who read the news would tell you that 2017 is one of the worst years in recent memory. We're facing a series of deeply troubling, even existential problems: fascism, terrorism, environmental collapse, racial and economic inequality, and more. Yet this narrative misses something important: by almost every meaningful measure, the modern world is better than it ever has been. In the United States, disease, crime, discrimination, and most forms of pollution are in long-term decline, while longevity and education keep rising and economic indicators are better than in any past generation. Worldwide, malnutrition and extreme poverty are at historic lows, and the risk of dying by war or violence is the lowest in human history. It's not a coincidence that we're confused--our perspectives on the world are blurred by the rise of social media, the machinations of politicians, and our own biases. Meanwhile, political reforms like the Clean Air Act and technological innovations like the hybridization of what have saved huge numbers of lives. In that optimistic spirit, Easterbrook offers specific policy reforms to address climate change, inequality, and other
