Pediatric Skin of Color is the first textbook devoted to the issues of pediatric skin of color. In 2052, more than fifty percent of the United States will be of color, and currently seventy percent of the world's population is termed of color. Therefore, this book fills the need for an instructional and educational reference work regarding these populations. Pediatric Skin of Color discusses the biology and clinical data regarding normal skin, skin conditions exclusive to individuals of color, systemic diseases of individuals of color that have a strong component of skin involvement, and the appearance and demographics of common skin diseases, comparing Caucasian and all skin of color populations. Written for dermatologists and pediatric dermatologists, this text includes data on African American, Asian (Southeast and East), Hispanic/Latino, and Middle Eastern patients, as well as Indigenous populations (i.e. Native Americans, Aborigines).

An unsurpassed visual archive of pediatric dermatology -- with more than 300 brand-new color images! A consummate classic with a fresh approach to pediatric dermatology Children's skin is different. Maturation affects the epidermal barrier, the cutaneous microbiome, adnexal structures, vasculature, and transcutaneous absorption of drugs. The immature skin is more susceptible to pathogens and environmental disruption. Many genetic disorders are either present at birth or manifest early in childhood. Skin diseases thus present differently in children than in adults. Pediatric dermatology has seen significant advances over the last decade, particularly in the field of molecular genetics research, which has furthered our understanding of the pathogenesis of many skin diseases and the development of new approaches to treatment. This fourth edition of the Harper classic provides state-of-the-art information on all aspects of skin disease in children. It covers the diagnosis and treatment of all conditions - both common and rare - with a consistently evidence-based approach. Existing content has been refreshed and fully updated to reflect emerging thinking and to incorporate the latest in research and clinical data - especially at the genetic level. This new fourth edition includes: Greater focus on the genetics behind skin disease, including new genes/genodermatoses, progress in genetic analysis, and stem cell transplants Increased coverage of lasers and other technologies used to treat skin disease More summary tables, learning points, tables of differential diagnosis, and clinical algorithms for diagnosis and management Additional online features, including patient information links and multiple choice questions Harper's Textbook of Pediatric Dermatology delivers crucial clinical insights and up-to-date research information that spans the breadth of the field. As the most comprehensive reference book on this subject available, this revised fourth edition will support and guide the daily practice of both dermatologists and pediatricians across the world.

Written by two leaders in the field of pediatric dermatology, this classic text provides both detailed content for the specialist and easily accessible information for the non-dermatologist and less experienced clinician. Features updated sections on infections, exanthems, vascular disorders, dermatoses and genodermatoses.
