questions in each topic are immediately followed by their detailed solutions. The book constitutes around 4100 most important MCQs.

A revolutionary reappraisal of how to educate our children and young people by Ken Robinson, the New York Times bestselling author of *The Element* and *Finding Your Element*. *You, Your Child, and School* is forthcoming from Viking. Ken Robinson is one of the world's most influential voices in education, and his 2006 TED Talk on the subject is the most viewed in the organization's history. Now, the internationally recognized leader on creativity and human potential focuses on one of the most critical issues of our time: how to transform the nation's troubled educational system. At a time when standardized testing businesses are raking in huge profits, when many schools are struggling, and students and educators everywhere are suffering under the strain, Robinson points the way forward. He argues for an end to our outmoded industrial educational system and proposes a highly personalized, organic approach that draws on today's unprecedented technological and professional resources to engage all students, develop their love of learning, and enable them to face the real challenges of the twenty-first century. Filled with anecdotes, observations and recommendations from professionals on the front line of transformative education, case histories, and groundbreaking research—and written with Robinson's trademark wit and engaging style—*Creative Schools* will inspire teachers, parents, and policy makers alike to rethink the real nature and purpose of education.

This volume contains the proceedings of two AMS Special Sessions on The Mathematics of Decisions, Elections, and Games, held January 4, 2012, in Boston, MA, and January 11-12, 2013, in San Diego, CA. Decision theory, voting theory, and game theory are three intertwined areas of mathematics that involve making optimal decisions under different contexts. Although these areas include their own mathematical results, much of the recent research in these areas involves developing and applying new perspectives from their intersection with other branches of mathematics, such as algebra, representation theory, combinatorics, convex geometry, dynamical systems, etc. The papers in this volume highlight and exploit the mathematical structure of decisions, elections, and games to model and to analyze problems from the social sciences.
