The Grand Tour is a series of novels written by American science fiction author Ben Bova. The novels present a theme of exploration and colonization of the Solar System by humans in the late 21st century. Most of the books focus on the exploration of one particular planet or planetary moon. Several recurring themes are presented throughout the series. In particular, most of the Solar System bodies whose exploration is the focus of a particular novel are presented as having life, either past or p

Grand Tour (novel series) - Wikipedia

Benjamin William Bova is an American Author; he has written over 120 books in both the science fiction and fact arenas, with the majority of his stories seeking to explore the idea of humanity's expansion across the solar system. With numerous awards to his name, Ben Bova has played important roles in both the Science Fiction Writers of America as well as the National Space Society, mostly in the role of president.

Award-winning author Ben Bova brings us New Earth, his latest tale of science fiction in his Grand Tour series. The entire world is thrilled by the discovery of a new Earthlike planet. Advance imaging shows that the planet has oceans of liquid water and a breathable oxygen-rich atmosphere. Eager to gain more information, a human exploration team is soon dispatched to explore the planet, now nicknamed New Earth. All of the explorers understand that they are essentially on a one-way mission. The trip takes eighty years each way, so even if they are able to get back to Earth, nearly 200 years will have elapsed. They will have aged only a dozen years thanks to cryonic suspension, but their friends and family will be gone and the very society that they once knew will have changed beyond recognition. The explorers are going into exile, and they know it. They are on this mission not because they were the best available, but because they were expendable. Upon landing on the planet they discover something unexpected: New Earth is inhabited by a small group of intelligent creatures who look very much like human beings. Who are these people? Are they native to this world, or invaders from elsewhere? While they may seem inordinately friendly to the human explorers, what are their real motivations? What do they want? Moreover, the scientists begin to realize that this planet cannot possibly be natural. They face a startling and nearly unthinkable question: Could New Earth be an artifact? At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

After being placed in cryonic suspension to travel to a newly discovered Earth-like planet, a team of explorers are astonished to discover that the planet is inhabited by suspicious human-like beings who may or may not be invaders from another world. By the six-time Hugo Award-winning author of Leviathans of Jupiter. 15,000 first printing.

Moreover, the scientists begin to realize that the planet cannot be natural. Rather, could New Earth be an artifact?

Earth is the latest science fiction novel from multiple Hugo Award winner Ben Bova, author of *Apes and Angels* and *Survival*. A wave of lethal gamma radiation is expanding from the core of the Milky Way galaxy at the speed of light, killing everything in its path. The countdown to when the death wave will reach Earth and the rest of the solar system is at two thousand years. Humans were helped by the Predecessors, who provided shielding generators that can protect the solar system. In return, the Predecessors asked humankind's help to save other intelligent species that are in danger of being annihilated. But what of Earth? With the Death Wave no longer a threat to humanity, humans have spread out and colonized all the worlds of the solar system. The technology of the Predecessors has made Earth a paradise, at least on the surface. But a policy of exiling discontented young people to the outer planets and asteroid mines has led to a deep divide between the new worlds and the homeworld, and those tensions are about to explode into open war. At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

In Ben Bova's previous novel *New Earth*, Jordan Kell led the first human mission beyond the solar system. They discovered the ruins of an ancient alien civilization. But one alien AI survived, and it revealed to Jordan Kell that an explosion in the black hole at the heart of the Milky Way galaxy has created a wave of deadly radiation, expanding out from the core toward Earth. Unless the human race acts to save itself, all life on Earth will be wiped out. When Kell and his team return to Earth, many years after their departure, they find that their world has changed almost beyond recognition. Not only has a second wave of greenhouse flooding caused sea levels to rise, but society has been changed by the consequences of the climate shift. Few people want to face Jordan Kell's news. He must convince Earth's new rulers that the human race is in danger of extinction unless it acts to forestall the death wave coming from the galaxy's heart. Six-time Hugo Award winner Ben Bova chronicles the saga of humankind's expansion beyond the solar system in *Death Wave*.

When an Earth-sized planet circling a star some 30 light-years away is detected, the race is on to build an astronomical observatory on Farside, the side of the Moon that never faces Earth—a dangerous task that is plagued by accidents, mental and emotional breakdowns and a discovery that will forever change the human race. 15,000 first printing.

Hugo Award winner Ben Bova continues his grand tour of the human settled solar system with a fan-pleasing look at life in

the Outer Planets, among the moons of Neptune. In the future, humanity has spread throughout the solar system, on planets and moons once visited only by robots or explored at a distance by far-voyaging spacecraft. No matter how hostile or welcoming the environment, mankind has forged a path and found a home. In the far reaches of the solar system, the outer planets—billions of miles from Earth, unknown for millennia—are being settled. Neptune, the ice giant, is swathed in clouds of hydrogen, helium, and methane and circled by rings of rock and dust. Three years ago, Ilona Magyr's father, Miklos, disappeared while exploring the seas of Neptune. Everyone believes he is dead—crushed, frozen, or boiled alive in Neptune's turbulent seas. With legendary space explorer Derek Humbolt piloting her ship and planetary scientist Jan Meitner guiding the search, Ilona Magyr knows she will find her father—alive—on Neptune. Her plans are irrevocably altered when she and her team discover the wreckage of an alien ship deep in Neptune's ocean, a discovery which changes humanity's understanding of its future...and its past. At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

Ben Bova, author of Earth, continues his exploration of the future of a human-settled Solar System with the science fiction action adventure Uranus, the first of his Outer Planets trilogy. On a privately financed orbital habitat above the planet Uranus, political idealism conflicts with pragmatic, and illegal, methods of financing. Add a scientist who has funding to launch a probe deep into Uranus's ocean depths to search for signs of life, and you have a three-way struggle for control. Humans can't live on the gas giants, making instead a life in orbit. Kyle Umber, a religious idealist, has built Haven, a sanctuary above the distant planet Uranus. He invites "the tired, the sick, the poor" of Earth to his orbital retreat where men and women can find spiritual peace and refuge from the world. The billionaire who financed Haven, however, has his own designs: beyond the reach of the laws of the inner planets Haven could become the center for an interplanetary web of narcotics, prostitution, even hunting human prey. Meanwhile a scientist has gotten funding from the Inner Planets to drop remote probes into the "oceans" of Uranus, in search of life. He brings money and prestige, but he also brings journalists and government oversight to Haven. And they can't have that. At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

Second in size only to Jupiter, bigger than a thousand Earths but light enough to float in water, home of crushing gravity and delicate, seemingly impossible rings, it dazzles and attracts us: SATURN Earth groans under the thumb of fundamentalist political regimes. Crisis after crisis has given authoritarians the upper hand. Freedom and opportunity exist in space, for those with the nerve and skill to run the risks. Now the governments of Earth are encouraging many of their most incorrigible dissidents to join a great ark on a one-way expedition, twice Jupiter's distance from the Sun, to Saturn, the ringed planet that baffled Galileo and has fascinated astronomers ever since. But humans will be human, on Earth or in the heavens—so amidst the idealism permeating Space Habitat Goddard are many individuals with long-term schemes, each awaiting the tight moment. And hidden from them is the greatest secret of all, the real purpose of this expedition, known to only a few.... At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

Considered one of Ben Bova's most famous Grand Tour novels: "A gripping, realistic tale of man's first expedition to the red planet. Don't miss it" (Terry Brooks, New York Times–bestselling author of The Shannara Chronicles). Jamie Waterman is a young Navaho geologist who is picked for the ground team of the first manned expedition to Mars. He will be joining an international team of astronauts and scientists. But once the crew land on the red planet, they soon discover they must battle not only the alien land on which they have invaded but earthbound bureaucrats as well. When they come face to face with a chasm ten times as deep and large as the Grand Canyon, all twenty-five astronauts must face the most shocking discovery of all . . . "The science fiction author who will have the greatest effect on the world." —Ray Bradbury, author of Fahrenheit 451 "A splendid book . . . Of his many books, Mars must be the most important." —Arthur C. Clarke, author of Islands in the Sky
