Praised by Entertainment Weekly as “ the man who put the fizz into physics, ” Dr. Len Fisher turns his attention to the science of cooperation in his lively and thought-provoking book. Fisher shows how the modern science of game theory has helped biologists to understand the evolution of cooperation in nature, and investigates how we might apply those lessons to our own society. In a series of experiments that take him from the polite confines of an English dinner party to crowded supermarkets, congested Indian roads, and the wilds of outback Australia, not to mention baseball strategies and the intricacies of quantum mechanics, Fisher sheds light on the problem of global cooperation. The outcomes are sometimes hilarious, sometimes alarming, but always revealing. A witty romp through a serious science, *Rock, Paper, Scissors* will both teach and delight anyone interested in what it takes to get people to work together.

The ideas of Max Wertheimer (1880-1943), a founder of Gestalt theory, are discussed in almost all general books on the history of psychology and in most introductory textbooks on psychology. This intellectual biography of Wertheimer is the first book-length treatment of a scholar whose ideas are recognized as of central importance to fields as varied as social psychology, cognitive neuroscience, problem solving, art, and visual neuroscience. King and Wertheimer trace the origins of Gestalt thought, demonstrating its continuing importance in fifteen chapters and several supplements to these chapters. They begin by reviewing Wertheimer's ancestry, family, childhood in central Europe, and his formal education. They elaborate on his activities during the period in which he developed the ideas that were later to become central to Gestalt psychology, documenting the formal emergence of this school of thought and tracing its development during World War I. The maturation of the Gestalt school at the University of Berlin during 1922-1929 is discussed in detail. Wertheimer's everyday life in America during his last decade is well documented, based in part on his son's recollections. The early reception of Gestalt theory in the United States is examined, with extensive references to articles in professional journals and periodicals. Wertheimer's relationships and interaction with three prominent psychologists of the time, Edwin Boring, Clark Hull, and Alexander Luria, are discussed based on previously unpublished correspondence. The final chapters discuss Wertheimer's essays on democracy, freedom, ethics, and truth, and detail personal challenges Wertheimer faced during his last years. His major work, published after his death, is *Productive Thinking*. Its reception is examined, and a concluding chapter considers recent responses to Max

“ This is perhaps the richest book on belonging you ’ ll ever read.... The inspiration one draws from every page of this book is an enhanced sense of what is possible. It revives the very thing we need most in these times: hope. ” —Claude M. Steele, author of *Whistling Vivaldi* We live in enormously polarized times. From politics to race, religion, gender, and class, division runs rampant. In 2020, 40 percent of each political party said that supporters of the opposing party were “ downright evil. ” In 2019, hate crimes reached a ten-year high in the United States. One in five Americans suffers from chronic loneliness, with teenagers and young adults at increasing risk. Social ties at work, at school, and in our communities have frayed. How did we become so alienated? Why is our sense of belonging so undermined? What if there were a set of science-backed techniques for navigating modern social life that could help us overcome our differences, create empathy, and forge lasting connections even across divides? What if there were a useful set of takeaways for managers and educators of all stripes to create connection even during challenging times? In *Belonging*, Stanford University professor Geoffrey L. Cohen applies his and others ’ groundbreaking research to the myriad problems of communal existence and offers concrete solutions for improving daily life at work, in school, in our homes, and in our communities. We all feel a deep need to belong, but most of us don ’ t fully appreciate that need in others. Often inadvertently, we behave in ways that threaten others ’ sense of belonging. Yet small acts that establish connection, brief activities such as reflecting on our core values, and a suite of practices that Cohen defines as “ situation-crafting ” have been shown to lessen political polarization, improve motivation and performance in school and work, combat racism in our communities, enhance health and well-being, and unleash the potential in ourselves and in our relationships. Belonging is essential for managers, educators, parents, administrators, caregivers, and everyone who wants those around them to thrive.
